Applicant's election of the species of Figs. 1-6 namely claims 1-9 without traverse has been acknowledged.

Claim 10 is withdrawn from consideration as drawn to the non-elected invention. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 7-9 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Andress et al. Andress et al shows all the structure of the device as recited by the claims. Andress shows the lid with recess central portion and first shoulder portions 20 and second shoulder portion at portion 19 (see figure 5) and the standard lid orientation (see figure 17) and inverted lid orientation (see figure 20).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Andress et al in view of DeMars. Andress et al shows all the structures of the device as recited by the claims except the cylindrical shape. It would have been obvious to make

the container of Andress et al out of any desired shape for example cylindrical shape as taught by DeMarsin order to enhance the handling and gripping process.

Any inquiry concerning this office action will be directed to Examiner Joseph Moy, (703) 308-1145.
